

**Yes, you can.®**

## **> rea Clematis®**

### **An Improved Seat for Improved Comfort**

The foundation of good posture lies in good seating. Maintaining the correct position securely and in comfort is a priority for anyone who spends long periods of time in a wheelchair or cannot move. Targeted support is now available in the new Rea™ **Clematis®** in the form of this new, ergonomically-designed support seat, so you can maintain good posture and enjoy peace of mind.

Confidence in posture solutions

### ➤ **Alternative posture for the user**

Equipped with an angle-adjustable seat and backrest, the Rea™ **Clematis**® provides the user with a range of possible positions. When the seat tilts, the areas supported by the body change; user can maintain an upright position and remain secure. A constant upright position prevents user from sliding out of the chair. As joints receive better support, the user experiences increased circulation, which in turn prevents stiffness.

### ➤ **Reduced sheering and compression**

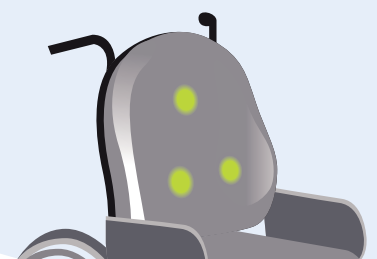

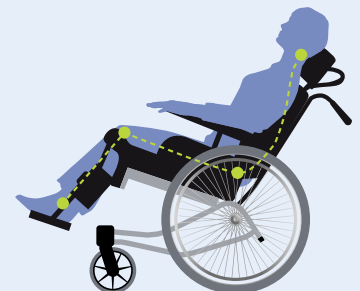

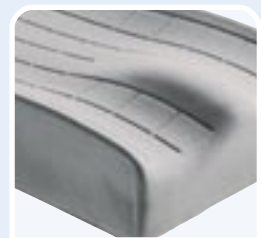

The presence of high pivot points, especially around the pelvis and knee joints is important when adjusting the backrest angle. Pivot points ensure that the body moves in tandem with the seat. The Rea™ **Clematis**® is designed in this way, minimising the sheering effect and reducing body compression, which results in an improved overall posture. Headrests and trunk supports remain at the same height whether the backrest is angled or not.

### ➤ **Preventing pressure sores**

The new **Flo-shape** seat cushion, featuring the popular Dartex® upholstery is especially designed for the user who spends many hours in a wheelchair and requires a cushion with optimal weight distribution to prevent pressure sores. **Flo-shape** cushions really contribute to an improved quality of life and maximum comfort. The top of the **Flo-shape** cushion is contoured for enhancing a stable seat posture.

### ➤ **Ergonomically-designed support**

The Rea™ **Clematis**® backrest features a rounded top and shaped lateral supports to allow for optimal contact between the backrest and the patient's back. The chair area around the pelvis and the chest are soft, enabling the user to sink into the backrest and stimulate an upright position of the trunk. All these ergonomically-designed features offer the patient a better quality of life and improved daily comfort.

## Options and Features

NEW

### Ergomatis – a new ergonomic backrest

The backrest is shaped to provide maximum support with backward-tilting compatibility. The height of both the backrest and the push handles can be adjusted.

NEW

### Backrest mould

The Ergomatis, Dartex® upholstery, foam cushion and stabilization are all moulded. The rear features an aesthetic backrest cover.

NEW

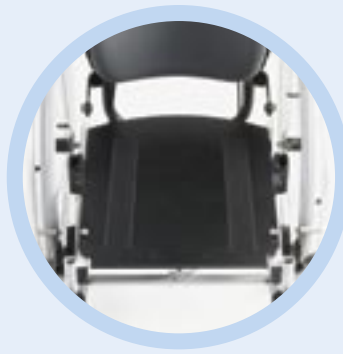

### The Ergomatis

Integrated into the cushion are the attachments for the trunk supports and the hub brakes cables.

### Adjustable body-length legrest

Adjusting the legrest ensures targeted support, which can be adapted to the foot or the calf.

### Adjustable seat depth

The depth of the seat is adjustable, as is the longer-shaped seat cushion.

NEW

### Flo-shaped seat cushion

The contoured **Flo-shape** seat is made of Dartex® and provides optimal support when sitting.

## Options and Features

**Headrest side wise adjustable**  
One of three versions of support for the head. This has adjustable wings for individual lateral support.

**Swing-away for easier transfer**

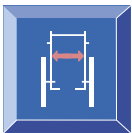

The trunk support has angle adjustable arms and adjustment in height as depth. All for well support of the trunk.

**User maneuvered brakes**

Rea™ **Clematis**® comes with optional extra brakes for a secure drive outdoors.
